Discovery Compliance

A Codex Skill for Litigation Attorneys

Thomas J. Daley, J.D. | *KoonsFuller, P.C.* | *jdbot.us*

Quickly verify whether all required bank and credit card statements have been produced in discovery — without manually sorting through hundreds of PDFs. This skill reads your document folders, extracts statement metadata, and generates a compliance matrix showing exactly which months are produced and which are missing.

Requirements

OpenAI Codex App

This skill runs inside the **OpenAI Codex** desktop app. Install it from:

https://developers.openai.com/codex/app/

Python

Python must be installed on your computer. To check, open a terminal and run:

```
python --version
```

If you receive an error, install Python from:

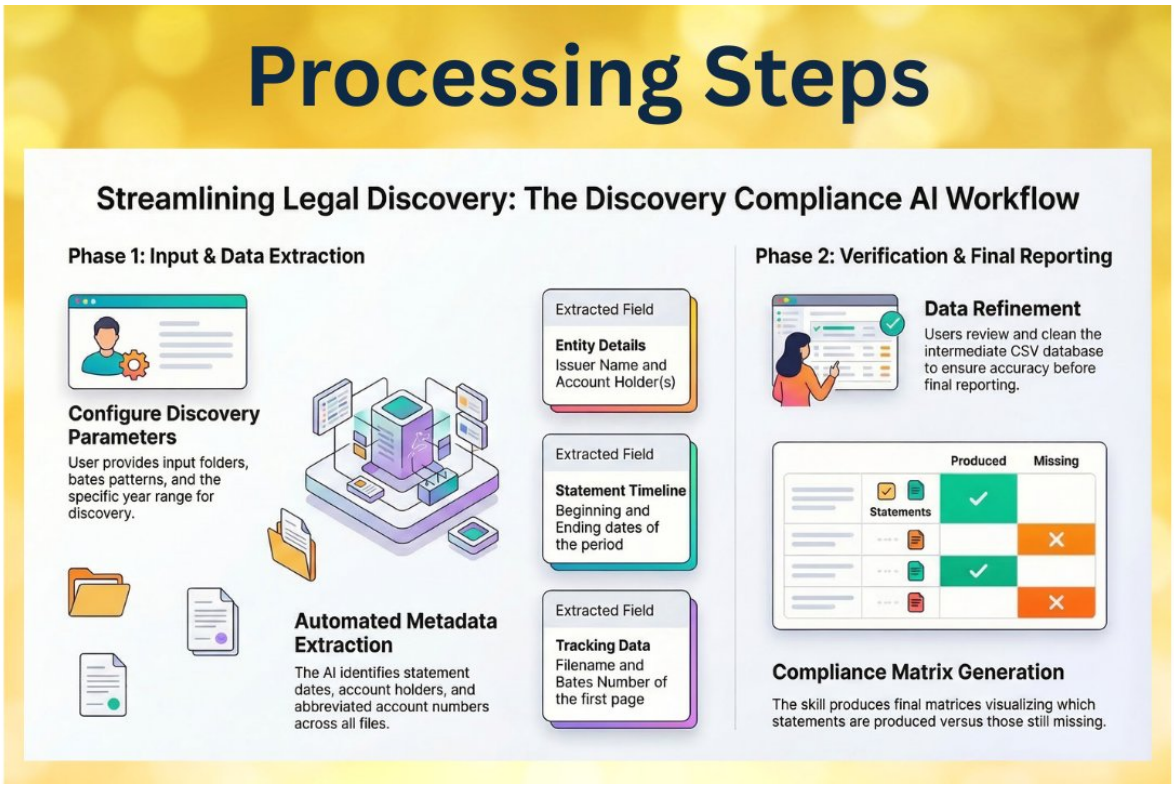
Platform	Installer URL
Windows	https://www.python.org/ftp/python/3.13.12/python-3.13.12-amd64.exe
Mac	https://www.python.org/downloads/release/python-3143/

Installing the Skill

Open the Codex app and enter the following prompt to install the skill automatically:

```
Use $skill-installer to install the skill from
https://github.com/tjdaley/codex_skills/tree/main/discovery-compliance
```

Using the Skill — Step by Step



Overview of the skill workflow

1

Create a Project in Codex

In the Codex app, find 'Threads' in the left-hand menu.
Click the folder-with-plus icon to create a new project.
Name the project after the matter, e.g.: DOE, JANE - Divorce

2

Create Two Subfolders

Inside the project folder, create exactly two folders:

- Our Production
- Their Production

3

Copy Statement Files

Under 'Our Production', create 'Bank Statements' and 'Credit Card Statements'.
Under 'Their Production', do the same.
Nested sub-folders are fine; the skill searches recursively.

4

Run the Skill

Open the Codex project, click 'New Thread', and type the prompt below.

```
Use $discovery-compliance to extract statement metadata
and build compliance matrices for discovery production.
```

5

Answer the Skill's Questions

The skill will ask for folder paths, a Bates regex, and a year range.
Prefix each answer with the question number to help the skill match your responses.

Skill Dialogue — What to Expect

SKILL ASKS:

```
Send these and I'll run the skill workflow for you:

  1. Bank statement folder path, if any.
  2. Credit card statement folder path, if any.
  3. Output folder path.
  4. Matter-specific Bates regex.
  5. Matrix year range, like 2020 to 2026

If you want, I can also search your OneDrive for likely
statement folders and propose the paths.
```

YOU RESPOND:

```
1. C:\Codex\DOE, JANE - Divorce\Our Production\Bank Statements
2. C:\Codex\DOE, JANE - Divorce\Our Production\Credit Card Statements
3. C:\Codex\DOE, JANE - Divorce\Our Production
4. JD0+\d{4}
5. 2020 - 2026
```

Tip: Putting the question number in front of your answer helps the skill match each response to its question.

Understanding the Bates Regex

The Bates regex tells the skill how to recognize Bates numbers in your documents. A regex (regular expression) is a search pattern. Here is how to read the example:

Pattern Part	Meaning
`JD`	Bates numbers start with the letters 'JD'
`0+`	The letters are followed by one or more zeros
`\d{4}`	Followed by at least 4 numeric digits (may include zeros)

Complex Bates Prefix Example

If your Bates number looks like: `Produced by Jane Doe on June 3, 2025: JD000123`

```
Produced by Jane Doe .*JD0+\d{4}
```

Pattern Part	Meaning
`Produced by Jane Doe`	Fixed preamble text
`.*`	Followed by any number of other characters
`JD`	Start of the actual Bates number
`0+`	One or more zeros
`\d{4}`	At least 4 numeric digits

Typical Folder Structure

Your folder layout can include nested sub-folders. The skill will find all files recursively. Here is a typical example:

```
DOE, JANE - Divorce
|- Our Production
|---- Bank Statements
|-------- Wells Fargo
|-------- Capital One
|-------- Bank of America
|---- Credit Card Statements
|-------- American Express
|-------- Home Depot
|-------- Chase Sapphire
|- Their Production
|---- Bank Statements
|---- Credit Card Statements
```

Sample Output — Compliance Matrix

When the skill finishes, it saves one or more spreadsheets to your output folder. Each spreadsheet contains a compliance matrix organized by account, showing:

- Months where a statement **was produced** — Bates number shown in the cell
- Months where a statement is **missing** — cell is empty
- Account numbers, date ranges, and Bates numbers for each statement
